# 1. Home page

In order for you to reach IIS visit www.siv.al.

Information given in the main page is open for all. Anyone can see the Albanian national vaccination schedule, or read more information on the vaccine preventable diseases. In this page are also listed questions related to vaccination process with the respective answers.

Parents/caretakers already registered in the system can easily check the vaccination status of their children or print the vaccination card by using their personal ID number as a password.

Vaccines of your child(ren)								
Name								
National Id								
	Search							

An IIS user (national, district or health center staff) can log in the system by using the given username and password. (Password is given to each user from the upper hierarchical level)

You can register caretaker by giving the necessary information. Data on \* fields are obligatory ones.

Attention! You should

assignee the correct health center where caretaker should take the child to get vaccines.

In order for you to know what to do in each page, read the information given on the yellow help squares that explains the functionalities and how to work on that page.

#### 2. Health Center level menus

- Person
- Immunization
- Stock Management
- Reports

Vaccinators in the Health Center level have four main menus. Each of these menus has its own sub-menus which will be described below.

#### 2.1 Person

■ Person Register Caretaker

> List/Find Caretaker Register Child List/Find Child

- Immunization
- **Stock Management**
- Reports

The "Person" menu serves to register a new person in the system and also list or find a person already registered in IIS. This person can be a parent/caretaker or a child.

The caretaker represents the person responsible for a child and it can be the parent itself or a relative, living in a certain area and linked with the nearest health center. (Caretakers can choose by themselves the respective HC)

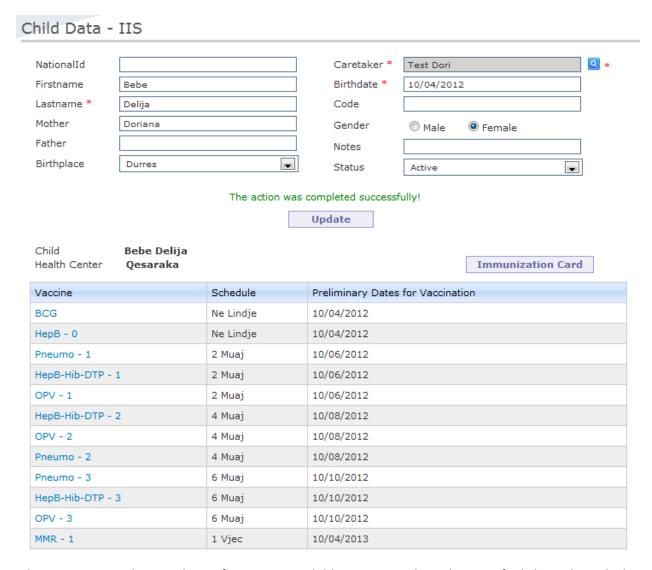

Caretakers are key points in the well functioning of the IIS since registered children are linked with them. Caretakers can have more than one child and if they decide to change the place or city they live in, once they move from one HC to another, their children will also automatically move and they will be included in the monthly plan for vaccination at the new HC.

A caretaker can be firstly registered in IIS at the maternity. Nurses there can record the minimum information for a caretaker. Information can be updated from the HC's nurse in a second moment, when the caretaker visits the HC to vaccinate his child (ren).

### Caretaker Data - IIS NationalId Birthdate Q Address \* H. Center \* Firstname \* Mobile 3556 Lastname \* Phone Mother Email Father Notes Code Add This Caretaker's Children Add Child

Fields with "\*" are mandatory ones. The ID number (or National Id) is not an obligatory field, but it is important if the caretaker wants to check at any time the vaccination status of his/her child. A mobile number is also important if the caretaker wants to be informed through a text message for the date and time of their child's next vaccination.

After the caretaker is registered, then we can register his/her child in the system. It is very important to link the child with the proper caretaker and to specify the correct birth date, because when a child is registered, the system generates automatically the preliminary scheduled dates to be followed for vaccination, according to the national vaccination schedule and to the child's birth date.

When a nurse needs to update information on children or caretakers they can find them through the sub menus "list/find child" or "list/find caretaker".

Nurses can search by giving name, surname, birthplace, a birth date range and also specify the HC if it is known.

#### 2.2 Immunization

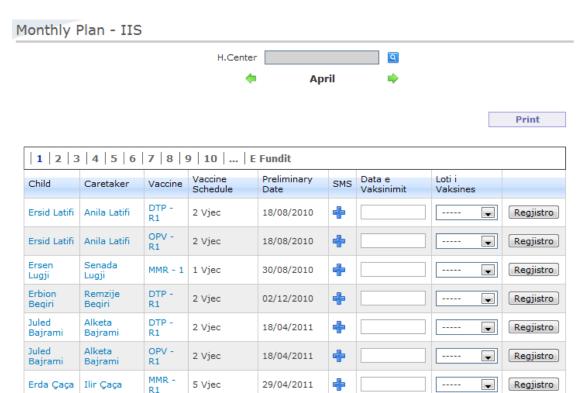

▶ Person
 □ Immunization
 Monthly Plan
 Register
 Immunization Card
 Print Monthly Plan

- Stock Management
- Reports

Under immunization menu you will find four sub menus which deal with monthly plan, register and immunization card.

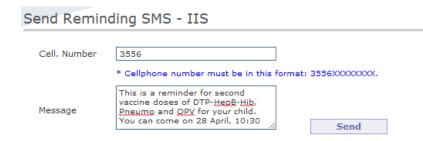

> The Monthly plan helps nurses by giving them the list of children due for a specific vaccine dose in a given month, in their health center.

The first ones listed will be the children delayed on vaccination already planned for vaccines in the previous months and then will be listed the ones due for vaccines in the current month.

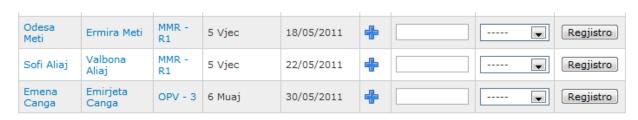

This monthly plan can be printed by clicking the Print button on the right, or by using the last sub menu "Print Monthly plan". If the health center has other vaccination points under its level the nurse can see the total amount of vaccine doses needed and also print each health center's monthly plan and give it together with the vaccines.

The printed monthly plan can be used from patronage nurses to inform children's caretakers but there is also another way of informing them by using the text messages through the button in the monthly plan (if the caretaker has already given e mobile number).

The message text field is free text, so nurses can write what they need to inform the caretaker about, for example, vaccine doses and/or date and time for the next vaccination.

Refused Appointments

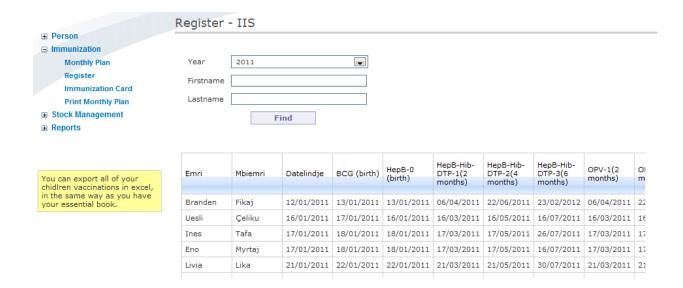

Under the monthly plan table you can find:

- A button on the right side with the "Refused Appointments", that sends to a page where all the refused vaccines are shown and it gives to nurses the possibility to show a certain vaccine dose in the monthly plan again, if caretaker is convinced to follow his/her immunization.
- A table with the calculated vaccine doses needed to fulfill the vaccinations for the month.

Vaccine Doses Required

Vaccine Code	Quantity
DT	15
DTP	24
HepB-Hib-DTP	15
MMR	32
OPV	54
Pneumo	14

➤ Under the "Register" submenu nurses can see and export in excel, their register which shows the dates of immunization for each vaccine dose of all children covered by their health center. This register has the same format and contains the same data with the register that the nurses have in hand, which is called essential register where the vaccine doses for all the children covered by the health center are registered. The register is shown year by year. This functionality can help nurses to check if everything is going well in both directions, in the system and in the essential register.

> The "Immunization Card" submenu helps nurses to find and directly print the child immunization card so they do not need to copy and write each vaccination date from the essential register to the immunization card.

Nurses should fill at least one field, but of course the more correct information they give the shorter the result list with the children will be, so they can easily find the one that they were looking for. This immunization card can be printed from the nurse and signed by the doctor in the respective baby clinic.

- > In order to register an administered vaccine there are different ways:
  - 1. Through the "child" page
  - 2. Through "monthly plan" page
  - 3. Through the "immunization card" page

In each of these pages the vaccine dose functions as a link which will direct nurses to the vaccine registration page.

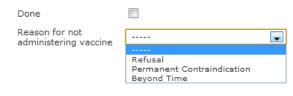

Vaccination date is prefilled with today's date, but nurses have possibilities to register a vaccine dose administered in a previous date by selecting it from the calendar, with a restriction for dates before birth date and a restriction for a date in the future.

When nurses record an administered vaccine in their Health center they can easily choose the lot number from the ones listed in the vaccine lot dropdown list and this vaccine dose will also be deducted from the vaccine stock available in that health center. In case they do not know the lot number they can use the undefined lot.

There are cases when the nurse will not administer a vaccine so, she should uncheck the "Done" box and choose a reason for not administering that vaccine such as:

- Refusal (in case the parent does not want to vaccinate the child with this vaccine)
- Contraindication (in cases when the child has had an anaphylactic reaction from the first dose, or when it is not recommended by doctor)

• Beyond time (in case children are not anymore due for that vaccine, such as the case of HepB at birth, or BCG in ages more than 1 yrs old)

In this case the nurse will not choose a lot number and after choosing the reason for not administering she should click the "register" button.

For further information nurses can fill the "Notes" filed which accepts free text.

Using the "plus" symbol, nurses can find the list of unvaccinated children in order to help them follow up with their vaccination.

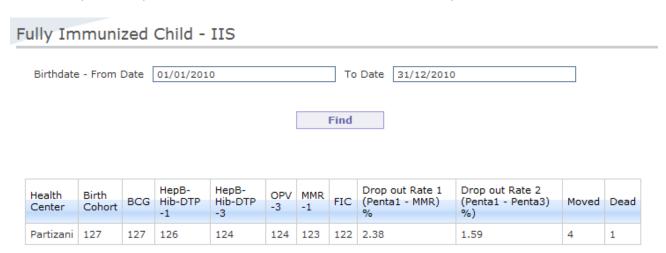

"Vaccination activity report" serves as a summary of work for nurses. They reported this form to the doctors in the health center and right now the system help nurses by giving it already summarized, and it can be exported to excel also.

"Birth cohort" submenu gives the number of children born and actually living in the area. It can be search per month by year, or as a total per each year.

"Fully immunized child" gives the information on vaccination given to children on their first year of life. Also an analysis of Drop out rates can be evaluated within this functionality.

Find duplicates" help nurse to find if they registered twice a child. In the example below we see a list of children which are twins, but if we check also the name we will not see any more duplicates for this health center.

#### 3. District level menus

■ IT Management

**■ Person**

**■ Immunization**

Stock Management

■ Reports

The District level has five menus in the system. Four of them (person, immunization, stock management and reports) are the same as the health center level. The only difference in these menus is that upper level, in this case the district, can see all belonging health centers.

The added menu is "IT Management" which will be described below.

#### 3.1 IT Management

#### ☐ IT Management

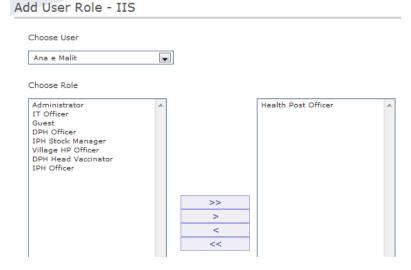

- User Management

This menu serves as a tool to manage users and health facilities beloning to the district.

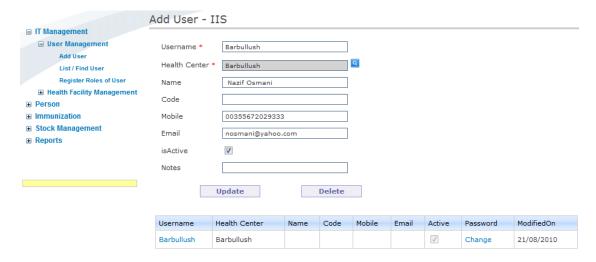

The "User Management" submenu helps to register, modify, delete and list the users in the system.

From this submenu it is also possible to assign a role, according to the hierarchy level, to each user in the system. If we do not assign a role for the user, even though he is registered the user can not use the system.

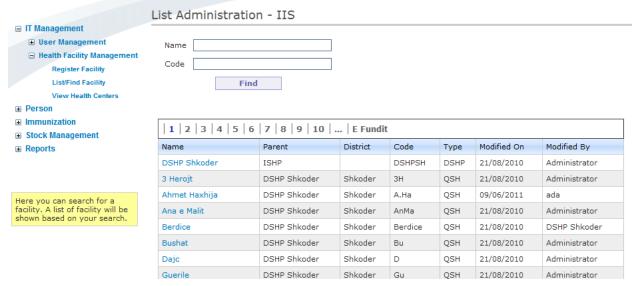

From submenu list/find users we can find, modify or delete the user information, and also change the password if it is needed.

The "Health Facility management" menu serves to register, modify or delete health centers belonging to the district.

By listing the Health centers, the user can find and modify them.

#### 4. National level menus

- IT Management
- IPH Administration
- Person
- Immunization
- **Stock Management**
- Reports

National level has six menus. This level has one more menu then the district level and two more menus then the vaccinator's level.

According to the hierarchy of construction national level can see all the levels below it.

#### 4.1 IT Management

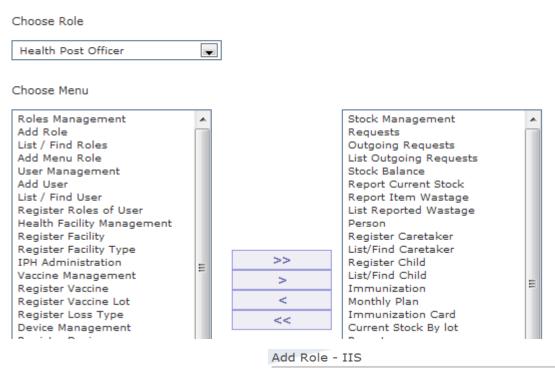

IT management menu in this level has some added submenus comparing to the one that district level has.

Submenus such as "User management" and "Health Facility management" are already explained in the district level menus.

Roles management helps the national staff to give specific rights in accessing the system to each role, such as in the table below:

#### Relate Menu to Role - IIS

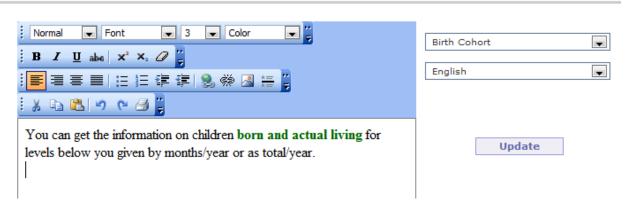

In this way is easy to configure the rights of each role to access the information in the system and then these roles are given to the registered users. Here it is also possible to add and modify roles in the system.

	ad Vaccinator ng Officer	
	Update	Delete
Name		ModifiedOn
DPH Head Vaccina	10/11/2010	

The "Help configuration" menu is also managed by the national level. In order to help each user this level can clarify or give more explanation related to the functionalities in each page. So this level can add notes and format the writing. These notes can be added once for each page in both languages (Albanian and English) and also they are available to be updated all the time.

# Helpful Tips Configuration - IIS

#### 4.2 IPH administration

# IPH Administration

■ Vaccine Management

Register Vaccine

List/Find Vaccine

Register Vaccine Lot

List/Find Vaccine Lot

Register Loss Type

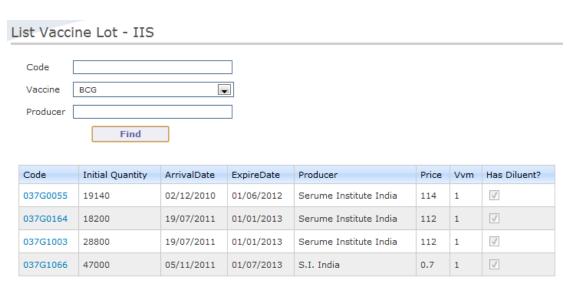

- Device Management
- Vaccine Schedule

IPH administration menu helps national level to record each vaccine/device received in this level, which will be distributed then in all subordinate levels.

All the information related to vaccine lot, price, expiry date, etc. is given from these menus, so nurses do not need to enter such information but they find it already in the system.

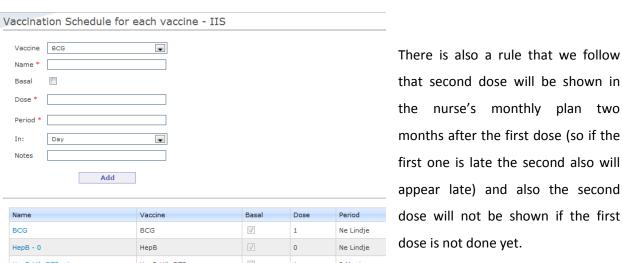

Vaccine	BCG
